

## Object Model / General Questions

1. Donors in context diagram but not in object model
2. Have more relationship names in object model
3. The relationship names we have are actions, not relationships
4. What is a bio?
5. Think about using "sponsor" instead of "donor"
6. Instead of "donate," use "sponsor"
7. Organization + volunteers separation: Why don't we just have users that own organizations?
8. Teams?
9. Event date?
10. Limit minimum donation to something

## Event Model

1. event orderings don't have constraints
2. Notifications?
  - a. want to know if someone donates to you
  - b. want email reminders for events
  - c. have users set their own preferences

## Distinguish MVP vs. post-MVP things

## Payments + Donations

1. refunds - do we track this at all?
2. hold funds until event?

## Wireframes

1. Make what views are called clearer
2. Put headers on the views
3. List of people volunteering - any choice to go anonymous?

## Account preferences? What are we going to do?

## How do we determine what to call the participation page

## Recurring events

## Records for past events

## Security

1. Watch out for cross-site scripting from email

Allow volunteer to compare him or herself with other people volunteering for an event + give statistics about individual volunteers over their participations. For each volunteer, show the average you have gotten in donations in the past.u

## **Design Analysis**

### Data Representation

1. Too verbose
2. Leave out ids
3. "We specified the data rep like the object model except for x, y, z"
4. Add attributes to the object model
